## EX OFFICIO

**Harlyn O. Halvorson**, *President (1976-1977)*

**J. Mehsen Joseph**, *Secretary*

**A. Frederick Rasmussen, Jr.**, *Vice-President (1976-1977)*

**Brinton M. Miller**, *Treasurer*

*Applied and Environmental Microbiology*, a publication of the American Society for Microbiology, 1913 I St., N.W., Washington, D.C. 20006, is devoted to the advancement and dissemination of applied knowledge as well as ecological knowledge, both applied and fundamental, concerning microorganisms. *Applied and Environmental Microbiology* is published monthly, two volumes per year. The nonmember subscription price is \$60 per year. The member subscription price is \$14 per year. Single copies are \$6.00. Correspondence relating to subscriptions, nonreceipt of journals, reprints,

defective copies, availability of back issues, and lost or late proofs should be directed to the ASM Publications Office, 1913 I St., N.W., Washington, D.C. 20006 (area 202-833-9680).

Second-class postage paid at Washington, D.C. 20006, and at additional mailing offices. Made in the United States of America.

# APPLIED AND ENVIRONMENTAL MICROBIOLOGY

## INSTRUCTIONS TO AUTHORS

**Correspondence.** Submit manuscripts in duplicate (original and one copy) to ASM Publications Office, 1913 I St., N.W., Washington, D.C. 20006. A \$35 check or money order (non-refundable) must accompany the manuscript to cover handling costs for all manuscripts submitted after 1 March 1977.

**General policy.** Any manuscript submitted must be a report of unpublished original research, which is not being considered for publication elsewhere. Each manuscript should present the results of an independent, cohesive study; numbered "series" papers are discouraged. When a submitted manuscript is judged to be more appropriate for the subject scope of one of the other ASM journals, the Editors will transfer it to that journal for consideration, so notifying the author. In borderline cases, the preference of the author will be considered, but the final decision rests with the respective Editors and the Chairman of the ASM Publications Board.

The "editorial style" of *Applied and Environmental Microbiology* essentially follows the *CBE Style Manual* (3rd ed., AIBS, 1972). Genetics symbols should essentially follow the recommendations of Demerec et al. (*Genetics* 54:61, 1966). Biochemical nomenclature, including abbreviations and symbols, should follow the recommendations of the IUPAC-IUB Commission on Biochemical Nomenclature (CBN) and the instructions to Authors of *J. Biol. Chem. and Arch. Biochem. Biophys.* (first issue of each year), which are based upon the CBN Recommendations and contain a list thereof. Reprints of these Recommendations and advice on biochemical and chemical nomenclature are available from the NRC Office of Biochemical Nomenclature (W. E. Cohn, Director), Biology Division, Oak Ridge Nat'l. Lab., Box Y, Oak Ridge, Tenn. 37830 (phone: 615-8611, ext. 3-7514). Normally, abbreviations (except those of standard units of measurement and symbols of the elements) should be defined and introduced parenthetically at first use in the text. Enzyme activities should be expressed in the terms set out in CBN's *Enzyme Nomenclature* (1972) (Elsevier Scientific Publishing Co.). Lengths, weights, volumes and molarities should make use of the prefixes m,  $\mu$ , n, and p (for  $10^{-3}$ ,  $10^{-6}$ ,  $10^{-9}$ , and  $10^{-12}$ , respectively), where applicable, avoiding such compound prefixes as  $m\mu$  and  $\mu\mu$ . Metric units should be employed as much as possible. The Editors reserve the privilege of editing manuscripts to make them conform to the above-mentioned stylistic conventions.

**Form of manuscript.** All parts of the manuscript should be typed double-space or, preferably, triple-space. Most manuscripts can and should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and Literature Cited. Only one weight of heading (paragraph lead-in) should be used within each section.

**Title.** A single statement of the subject of a paper is preferred to a main title-subtitle arrangement. A short version of the title (no more than 46 characters and spaces) should be supplied for use as a running head.

**Abstract.** An abstract appears at the beginning of each paper. The abstract should not exceed 200 words.

**Literature Cited.** In the text, references are cited by number. The Literature Cited section should be typed in alphabetical order, by first author, and numbered. Each reference should include the title of the article and inclusive pagination. Names of journals are abbrevi-

ated according to *Bibliographic Guide for Editors & Authors* (American Chemical Society, 1974). Literature citations should be restricted to closely pertinent papers. Citations of abstracts, theses, "unpublished data," "personal communications," and "in press" will not be accepted in the Literature Cited.

**Tables.** Each table should be typed on a separate page. The data should be arranged so that columns of like material read down, not across. The headings should be sufficiently clear so that the meaning of the data will be understandable without reference to the text. Explanatory footnotes are permitted, but detailed descriptions of the experiments are not. The materials and methods used to gain the data should properly remain in the section of that name.

**Figures.** A complete set of figures, preferably glossy photographs, should accompany each of the two copies of the manuscript. Graphs (*submit as photographs*) should be finished drawings not needing further artwork or type-setting. Absolutely no part of a graph should be typewritten (except the legend, which should be typed on a separate page). Each figure should be numbered and should include the name of the author, either in the margin or on the back (marked lightly with a soft pencil). All lettering should be done with a lettering set. Most graphs will be reduced to 6.6 cm in width, and all elements in the drawing should be prepared to withstand this reduction. The legend of the figure should provide enough information so that the figure is understandable without reference to the text. Experimental details from Materials and Methods should not be repeated in figure legends.

**Nomenclature of microorganisms.** In general, the nomenclature for bacteria presented in *Bergey's Manual of Determinative Bacteriology* (8th ed., 1974) is used. If an author challenges this nomenclature, his own judgment will be followed, but the name in *Bergey's Manual* should follow in parentheses the first time the name is used in the text and in the Abstract. Papers which include extensive taxonomic material (e.g., description of new taxa) will not be published in this journal. The proper place for publication of taxonomic material is the *International Journal of Systematic Bacteriology* (IJSB), which is published by the ASM for the International Association of Microbiological Societies. If the main thrust of such a paper is not taxonomy, the paper should be divided, the taxonomy portion being submitted to IJSB and the other portion to this journal.

**Notes.** The accepted form for Notes is somewhat different from the foregoing. Contributors should consult a recent issue of *Applied and Environmental Microbiology* for style. Notes should not exceed 500 words. The abstract should not exceed 25 words.

**Copyright.** Once a paper has been published in *Applied and Environmental Microbiology*, which is a copyrighted publication, the legal ownership of all parts of the paper, including the illustrations, has passed from the author to ASM. If the same author, or any author, wishes to republish material previously published in *Applied and Environmental Microbiology*, he must first receive written permission from ASM.

**Reprints.** Reprints (in multiples of 100) may be purchased by contributors. A table showing the cost of reprints, and an order form, will be sent with the proof.

The indispensable laboratory manual—

# Manual of Clinical Immunology

Edited by Noel R. Rose and Herman Friedman

*A joint effort by members of the American Society for Microbiology and the American Association of Immunologists*

This definitive and much needed new book is a companion volume to the highly acclaimed *Manual of Clinical Microbiology*, 2nd Edition. It has been written to provide a current, comprehensive, and definitive source of information about the best methods for conducting specific immunological tests in laboratory immunology. It deals exclusively with the applications of immunology to the detection and analysis of a wide variety of diseases, including, but not limited to, those induced by microorganisms. The clinical interpretations of each procedure are detailed, and pitfalls and problems in performing the various analyses are discussed.

The contents, by section, are: Tests for humoral components of the immunological response — Tests for cellular components of the immunological response — Immunoassays — Bacterial, mycotic, and parasitic immunology — Viral, rickettsial, and chlamydial immunology — Immunoematology — Laboratory examination of patients with allergic and immunodeficiency diseases — Autoimmune diseases — Tumor immunology — Transplantation immunology — Licensure and certification programs in clinical immunology laboratories.

*Publication date: 16 August 1976. 932 pages. Available in two bindings:*  
Cloth, at \$20.00 (ISBN: 0-914826-09-3). Flexible, at \$16.00 (ISBN: 0-914826-09-3).

*(Note: Members of ASM may purchase this book at the special member discount price of \$12.00 cloth, \$10.00 flexible. Member purchases are for personal use only. Payment must accompany member orders.)*

*Published and distributed by:* **AMERICAN SOCIETY FOR MICROBIOLOGY**  
1913 I Street, N.W., Washington, D.C. 20006
