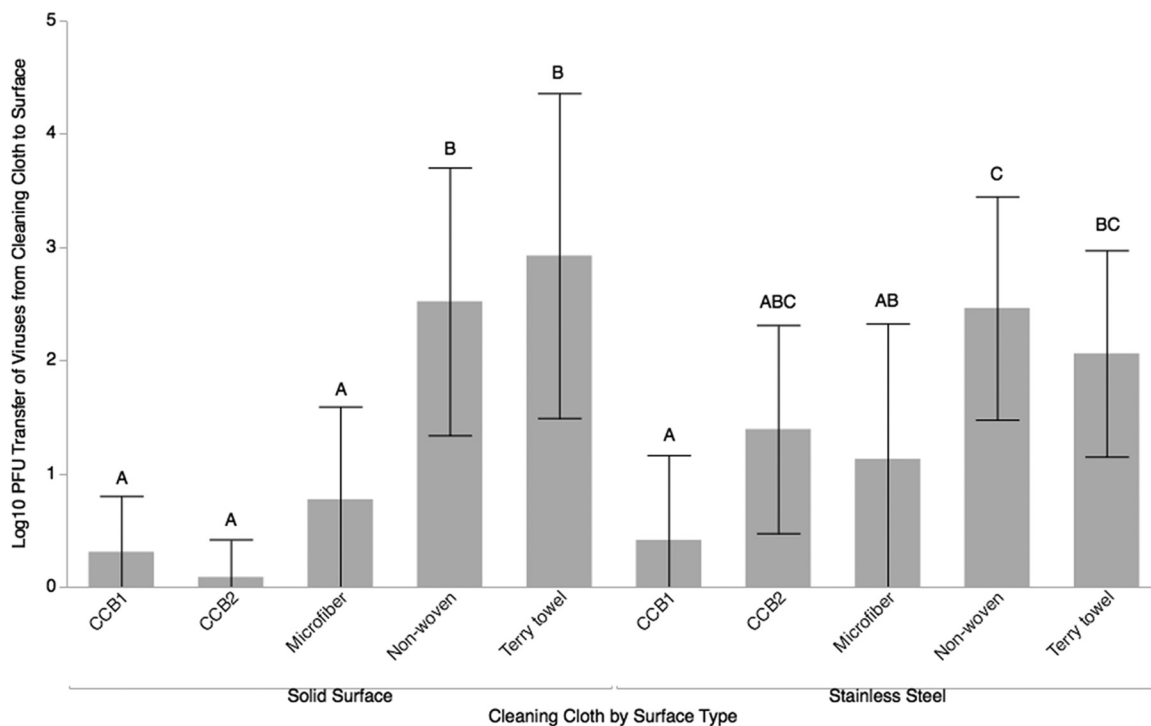

FIG 2 Total virus (FCV, MS2, PRD1) transfer to solid surface and stainless steel by cleaning cloths. Letters above the bars represent statistically significant differences ($P \leq 0.05$) between cloth types for virus transfer within each surface type. Bars with different capital letters (A, B, and C) represent significantly different values. Each error bar was constructed using 1 standard deviation from the mean. CCB1, cellulose/cotton blend 1; CCB2, cellulose/cotton blend 2.
