### COVER IMAGE

Cover photograph: Biofilm of a mutant of *Mycobacterium smegmatis* defective for resuscitation-promoting factors. Mycobacterial biofilms were grown as floating pellicles in Sauton's minimal medium and imaged using a high-resolution stereomicroscope. Nodule-like structures in this mutant biofilm are atypical and replace the characteristic ruffled morphology of wild-type *M. smegmatis* biofilms. (See related article at e00687-18.)
