COVER IMAGE

Cover photograph: Among a library of *Escherichia coli* transposon mutants, struggling to stay afloat in a tumultuous sea, an *E. coli* purine auxotroph is rescued by a purine life ring excreted by the solar-powered vessel, *Rhodospseudomonas palustris*. The image is an analogy for the discovery of unexpected purine cross-feeding from *R. palustris* to *E. coli* through transposon sequencing in a mutualistic coculture. (Image by J. B. McKinlay.)
